Planning
An idea or thought and drawing out plans for what you want to do
Analysis of requirements
Doing research on what it is your idea may need and who may use what you're planning on creating
Design
Design the web application for Navigation, Interactions, easy usability, cleanliness, and optimal function
Implementation
Writing the code for your site. for the functionality and the design. How it works and looks using code.
Testing and integration
Testing the application and making sure that features work as intended.
Deployment
The application then gets posted onto something like github and then can be hosted on a cloud service like Hreoku
Maintain
This is where you will send needed updates and revisions if there are any bugs or issues with the application.
